

Boot Loader

The SPA504G uses the PSPBoot boot loader. This is an old bootloader with not much info out there but there is one piece of documentation floating around and can be found [here](#).

The bootloader can be found in the firmware update files: `psbl.elf`

Recovery Mode

There is also a recovery mode the device will boot into if it cannot load the bootloader. This is a minimal version of PSPBoot. This recovery mode can be manually entered into at device boot by pressing `esc` when prompted with `Press ESC for monitor...`.

```
PSPBoot1.4 rev: 1.4.0.6
```

```
(c) Copyright 2002-2008 Texas Instruments, Inc. All Rights Reserved.
```

```
Press ESC for monitor... 1
```

```
(psbl) help
```

```
reboot      version      info          fa
printenv    setenv        setpermenv    unsetenv
defragenv   fmt           fmtkosmos     boot
dm          oclk          help          ls
df          cp            cat           rm
tftp        upgrade
(psbl)
```
